

Updated 1-1-2022

The clinic's equipment:

We have particular interest and experience in ultrasound scanning in 2D, 3D, 4D scanning

We have the latest high-end ultrasound machines and have special interest in

1. obstetric scan in all trimesters on suspicion of abortion, ectopic pregnancy, too small fetus, well-being scan.
2. fertility assessment.
3. gynecological scan in connection with cyst, endometriosis, PCOS
4. no waiting time for medical abortion, suspicion of ongoing abortion.

Our machines are connected to large flat screens, so you can follow during the scan. The machines are also connected to a central server so that all the measurements and images during the scan are stored digitally. It is used for quality assurance and staff training.
